Display There is no display or screen on either model, so this category is effectively a tie. Both rely on simple physical controls and EGO’s straightforward 3-speed operation, which keeps things easy to use rather than gadget-heavy. If you want a blower with digital readouts, neither product offers that.

Performance Performance is also a tie on paper, because both the LB5300 and LB5302 are the same 56V blower with 530 CFM output and 3-speed turbo capability. That puts them in a strong position for typical UK garden work: clearing wet leaves from lawns in autumn, shifting hedge trimmings from borders, and blowing debris off patios, paths, and decking. In real use, the blower head and motor are what matter here, and both products share the same platform, so neither has a performance advantage. The turbo setting is the key strength of both: it gives enough punch for heavier debris without feeling wildly overpowered for smaller town gardens.

Build quality and design Again, this is a tie. EGO’s cordless blowers are generally well regarded for solid plastics, good ergonomics, and a balanced feel, and these two models are built from the same design. The advantage of the platform is that the battery sits on the rear of the unit, helping counterbalance the nozzle and making the blower less fatiguing on longer jobs. For UK users dealing with damp, heavier leaf litter in late autumn, that balance matters because you may be working longer than you would on dry summer debris. Neither model has a design edge over the other; the difference is not the tool, but the package.

Battery life This is where Product B wins, but only because it includes a 2.5Ah battery and charger. Product A does not include either, so its usable runtime depends entirely on what battery you already own. If you already have EGO batteries, Product A can be excellent value; if you do not, Product B is the only one that gets you up and running immediately. The included 2.5Ah pack is a sensible starter battery for light-to-medium garden jobs, though it will not be the longest-lasting option for large plots or repeated turbo use. For a small to medium UK garden, it is enough for routine leaf clearing, but bigger gardens or heavy autumn clean-ups may eventually benefit from a larger EGO battery.

Price and value for money Product A wins on upfront price by a clear margin: £227.53 versus £320.99, a difference of £93.46. That is a substantial saving if you already own compatible EGO batteries and charger, because you are paying only for the bare blower. In that scenario, Product A is the better value by a wide margin. However, if you need to buy into the system from scratch, Product B can be the more practical deal because the extra cost includes the battery and charger, which would otherwise add significant expense. In other words, Product A is cheaper, but Product B is better value for first-time EGO buyers.

Game library/features Neither product has a game library or entertainment features, so this category does not apply in any meaningful way. In practical terms, the relevant feature comparison is battery inclusion, and that is where Product B pulls ahead for convenience. Both have the same 3-speed turbo setup, so the functional feature set is identical aside from the bundle contents.

Overall user experience For ease of ownership, Product B wins for most people because it is a complete kit. Unbox it, charge the battery, and you are ready to go, which is especially appealing if you want a hassle-free first cordless blower for a standard UK garden. Product A is the more strategic buy for existing EGO owners, because it avoids paying again for a battery and charger you may already have. The user experience therefore depends heavily on your current setup: Product B is simpler, Product A is smarter if you are already in the ecosystem.

Overall, these are the same blower in different packaging, so the decision is not about performance. If you already have EGO batteries, Product A is the obvious choice because it saves £93.46 for the same 530 CFM machine. If you are starting from zero, Product B is the better all-in-one purchase because it includes everything you need and still gives you EGO's strong cordless performance. For most UK buyers, the best value is determined by whether you already own EGO kit.

Winner: a

Product A is the better buy for most informed shoppers because it delivers the same 530 CFM, 3-speed EGO blower for £93.46 less. If you already own EGO batteries and a charger, there is no reason to pay extra for the kit version. Product B only wins if you need a complete starter package, not because it is a better blower.

Buy Product A If...

Buy Product A if you already own EGO 56V batteries and a charger, or plan to expand an existing EGO tool collection. It is the best-value option for repeat EGO users who want the same performance without paying for duplicate accessories. It also makes sense if you are price-sensitive and happy to buy the battery separately later.

Buy Product B If...

Buy Product B if this is your first EGO tool and you want a ready-to-use package straight out of the box. It is also the safer choice if you want one purchase that covers everything, rather than sourcing a compatible battery and charger separately. For smaller UK gardens, the included 2.5Ah battery is enough for routine leaf clearing and light patio work.
